Subject:	Info on how to update synergia		
Description:	Although it should be clear to people of relevant background that synergia is conceptually is viewed independently of chef and any other package that depends on, I am willing to bet a large sum of \$ that most of our potential users won't make the same conceptual assumption. Thus, we should include a couple of lines in the documentation on how to get the most up-to-date simulation environment for actually running something useful. I am adding this comment because I just started updating, and I had to pause and think on where I should go to do my git pulls, and makes, and other good things.
